

## **STEPS TO VIEW HIDDEN FILES FROM VIRUS INFECTED PEN DRIVE**

If you did not format your flash drive, then check whether the files are not in hidden mode. Follow the following steps.

Step 1:

Click on the below link and download the file "AutorunExterminator"

<http://en.kioskea.net/download/download-11613-autorun-exterminator>

Extract it --> Double-click on "AutorunExterminator" --> Plug your pendrive now.

This will remove the autorun.inf files from your pendrive and also from drives.

Step 2:

Click on "Start" -->Run --> type cmd and click on OK.

Here I assume your pendrive as G:

Enter this command.

```
attrib -h -r -s /s /d g:\*.*
```

You can copy the above command --> Right-click in the Command Prompt and paste it.

Note : Replace the letter g with your flash drive letter.

Now check for your files in Pen Drive.

Step 3:

After that, download the Malwarebytes' Anti-Malware from the below link

<http://en.kioskea.net/download/download-105-malwarebytes-anti-malware>

Update it --> Perform "Full Scan"

Note : Default selected option is "Quick Scan".

Good Luck.
