

Find an File from Asp.net Uploaded Folder using C#

Introduction:

Here I will explain how to find a file from a folder in [asp.net](#) using [c#](#)

Description:

To implement this functionality we need to write the following code like as shown below

```
string FileName = "test.txt";
string Path = "E:\\\" + FileName;
FileInfo file = new FileInfo(Path);
if (file.Exists)
{
//perform your action
}
```

Now open code behind file and add following namespaces

C# Code

```
using System;
using System.Drawing;
using System.IO;
```

After that write the following code in code behind

```
protected void btnDelete_Click(object sender, EventArgs e)
{
string filename =txtName.Text;
string path = "E:\\\" + filename; // this is the folder path on server which can easily
found by getting an error from your server

FileInfo file = new FileInfo(path);
if (file.Exists)
{
```

Find an File from Asp.net Uploaded Folder using C#

```
//perform action  
}  
else  
{  
lblResult.Text = filename + " file not exists in filepath";  
lblResult.ForeColor = Color.Red;  
}
```
